

STEPHEN BILSON

President, ReWater Systems, Inc.

Steve Bilson established ReWater Systems, Inc., in 1990, and runs their operations from San Diego. ReWater is the nation's largest manufacturer of legal greywater irrigation systems.

Mr. Bilson holds US Patent #5,217,323 on ReWater's systems, which use a unique underground drip emitter made especially for greywater, and which have a special controller for automatic filter cleaning and irrigation.

In 1992, Mr. Bilson sponsored California Assembly Bill #3518 legalizing single family dwelling greywater systems, and in 1995, he sponsored Assembly Bill #313 for multi family/commercial/industrial systems.

He worked closely with the California Department of Water Resources and Department of Health Services and numerous state and local agencies in writing the state greywater irrigation code. Since then, he has helped other states with their greywater irrigation codes.

ReWater's greywater irrigation systems have been sold extensively in California and throughout the United States. Due to their water reuse, application efficiency, wastewater reduction, and non-point source pollution prevention benefits, ReWater's systems have been determined to be cost effective enough to pay for themselves through low-interest US EPA State Revolving Funds previously thought reserved

only for municipally-owned capital improvement projects.

ReWater's systems can earn LEED points for water efficiency and efficient irrigation, and are by far the most cost effective LEED points on a project.

He says if it has to do with greywater, he's heard it a hundred times, and many of the answers are on ReWater's website, www.rewater.com.

Mr. Bilson is an avid outdoorsman and fly fisherman and is active in numerous water conservation initiatives and causes.
